

Ignite implementation services

For Data Quality & Observability

Collibra's Ignite implementation is designed to deliver value with your Collibra solution quickly, teach you how to configure the system yourself and support adoption throughout your first year on the platform. With this comprehensive implementation service, you'll receive expert guidance, configuration, training and adoption support - all from top Collibra experts.

Why Ignite

Implement your first use case

within 2-3 months

Set a strong foundation

via prescriptive, role-based education

Drive adoption and embrace change

with capabilities and plans designed for your team

Keep the momentum going

by focusing on adoption and innovation with your dedicated team throughout Year 1

Collibra Professional Services is dedicated to helping you realize value at every step of your journey. Through our mix of packaged offers, custom consultant services and best-practice coaching – delivered by top industry experts – we can meet the most complex data requirements and help unlock your full potential.

Your Ignite journey

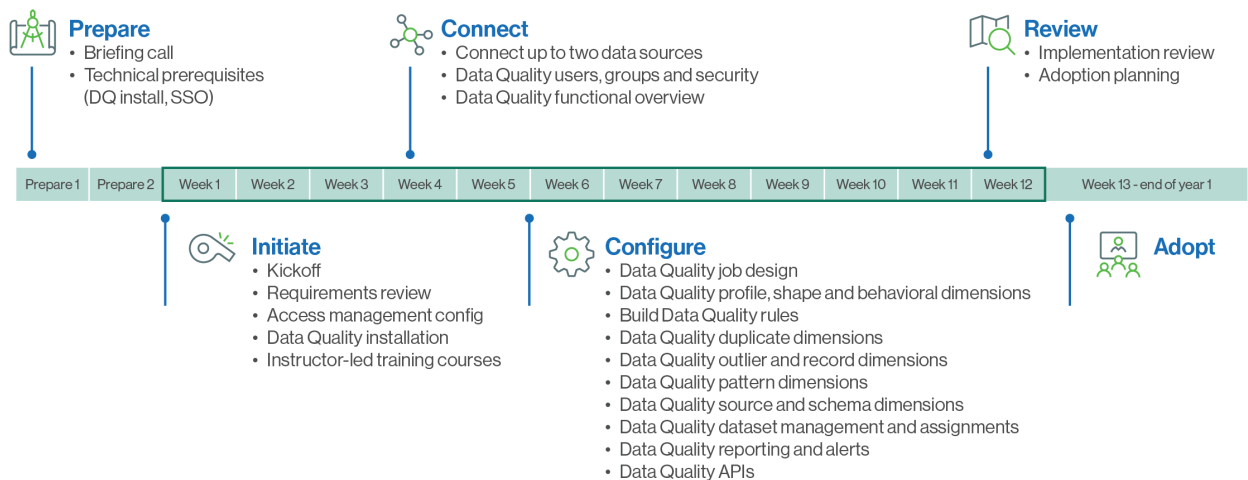

Implementation overview

The Ignite implementation consists of six distinct phases:

- **Prepare:** Hold a briefing call and complete any technical prerequisites
- **Initiate:** Kickoff the project, confirm business requirements, configure access management and install Collibra Data Quality
- **Connect:** Connect Collibra Data Quality with the data sources to be monitored, discuss user management and security, as well as a functional overview
- **Configure:** Learn how to configure various platform elements to support your organization's data quality needs
- **Review:** Go live, review your environment and start planning for the future
- **Adopt:** Work with an Enterprise Architect at the frequency you select for your Ignite package to advance your solution after it has been implemented

Before and throughout the implementation process, your Collibra team will support and guide you with calls, pre-work tasks, workshops and education.

Your Ignite journey: Detailed timeline

The details

People

- Collibra team: Solution Architect, Technical Architect, Implementation Manager, Services Manager
- Your team: Platform Administrator / Architect, Data Quality lead, Data Steward, Data Engineer, Project Manager

Education

- During implementation: 10 hours of instructor-led training correlated to your implementation activities
- Access to [Collibra University](#) for self-paced and role-based learning

Connections and SSO

- Connection of [two supported sources](#) for data quality
- Single sign-on (SSO) set-up based on SAML-supported solutions

Post-implementation adoption support

After implementation is complete, you will continue to have touchpoints with an Enterprise Architect to ensure that you can execute your adoption plan and adapt the Collibra platform to your needs as they arise. Examples include:

- Co-author the adoption plan for the year, including both periodic and ongoing activities
- Provide guidance and templates to support CI/CD pipeline automation
- Make recommendations for scope balancing and tuning to rightsize DQ coverage
- Assist with rules migration from a third-party DQ tool
- Share best practices and coach your team to create autonomy
- Provide hands-on assistance in implementing further use cases
- Provide guidance on newly released Collibra functionality

By combining best-practice implementations, extensive education services, and ongoing adoption support, Collibra's Ignite package is designed to bring value quickly and help you grow your platform. Talk with your Collibra team for details.
